## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to the use of a C-Raf inhibitor for the manufacture of a composition, classified in class 514, subclass 418.
- II. Claims 12, 14 and 15 (in part), drawn to a method of preventing or inhibiting neuronal cell death, classified in class 514, subclass 415.
- III. Claims 13 and 15 (in part), drawn to a method of repairing or regenerating neuronal cells, classified in class 548, subclass 484.
- IV. Claim 16, drawn to a method of treating neurodegenerative disease, classified in class 514, subclass 418.

The examiner notes that the "use" claims of group I are being read as methods of manufacture of a composition. If this interpretation is deemed incorrect by applicant's, applicant's can point out and clarify what the use claims of group I are drawn to. Applicant's are reminded that use claims are not proper US claim practice language and amending of these claims will be required to present the claims in accordance with US practice if elected.

Inventions I, II, III and IV are directed to related methods. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the

inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed are drawn to divergent methods of treatment either broadly or specifically. Group I is drawn to the use of a C-Raf inhibitor for the manufacture of a composition, Group II is drawn to a method of preventing or inhibiting neuronal cell death, Group III is to a method of repairing or regenerating neuronal cells, and Group IV is drawn to a method of treating neurodegenerative disease. There is no clear evidence that compounds and methods suitable for methods of making a composition (C-Raf inhibitor), and methods of inhibiting or preventing neuronal cell death would affect any repair or regenerating of neuronal cells, further the preventing or inhibiting neuronal cell death while perhaps providing therapeutic benefits does not necessarily provide treatment for any neuronal disease. The reasoning is similar for Groups I and III and IV. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their

recognized divergent subject matter, restriction for examination purposes as indicated is proper.

No phone call was made to request an election over the phone due to the complexity of the subject matter.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
